

PROMATIS & CELONIS PROCESS MINING.

IMPROVE YOUR PROCESS.

What is Process Mining?

Process Mining is a process that examines digital traces in IT systems and reconstructs a real picture of business processes from concrete event data, known as log files. Process Mining deals with the meaningful representation of processes within a company. These processes need to be recorded in their totality, the weak points need to be identified and the effects have to be visualized so that on this basis, adjustments and improvements can be made.

What can Celonis Process Mining do?

The innovative process mining product by global market leader Celonis SE extracts the digital process traces from a large number of source systems (e. g. Oracle E-Business Suite, Oracle Applications Cloud) in real-time and links them down to single document level via any desired metrics. In addition to the visualization of the processes, it is also possible to search for compliance violations, unnecessary process steps, and delays, which are then systematically analyzed to form the basis for process optimization.

What are the benefits of PROMATIS?

Process Mining is an integral part of the PROMATIS service portfolio for Business Process Excellence. It uses the innovative products by Celonis, which are available on-premise or in the cloud. These are complemented by process mining expertise combined with the profound Oracle application and technology knowledge of the PROMATIS experts. This quickly identifies the potential for improvement and helps to develop options for an efficient process design.

Partnership PROMATIS & Celonis

The innovative product by market leader Celonis and the profound process knowledge at PROMATIS form an ideal symbiosis that is reflected in the harmonious partnership between the technology companies. The two share profound knowledge in business processes and a high degree of client orientation.

PROMATIS Business Process Excellence

The service portfolio for Business Process Excellence includes the consideration of complex processes within the company. The services go far beyond the optimization of business processes: Adaptable business processes, which offer the potential for continuous adaptation to changed business models and marketing conditions, are designed and realized.

Celonis Process Mining

The goal with Celonis is simple: to analyze today's business processes so that the processes of tomorrow are more efficient. The scalable process mining solution, which can analyze all business processes, includes comprehensive capabilities for managing user roles, data sources, and analytics.

Features Celonis Process Mining

- » Reconstruction and visualization of processes by using digital traces in IT systems.
- » Uncovering vulnerabilities and creating the foundation for an efficient process flow.
- » Intuitive user interface for quick identification of causes and a simple search for solutions.
- » Automated target/as-is comparison and visualization of the effects on the process performance.
- » Real-time optimization for fast reaction to changes.

Scope PROMATIS Process Services

- » Support for embedding Celonis software in the system landscape.
- » Creation of client-specific analyzes as well as graphical evaluations and tables.
- » Reconstruction of the actual process models and documentation of the target process models either in BPMN or Horus.
- » Interpretation of the analysis results, definition of options for action.
- » Support in the implementation of process improvements through project management, organizational change management, and quality assurance.

Your benefits

- » Meaningful analysis of real business processes.
- » Intelligent evaluation of processes and identification of optimization potential.
- » Drill-through analysis.
- » Development of concrete improvement concepts.
- » Modeling optimized processes with the Horus Business Modeler.
- » Efficient realization through process and project know-how.
